Tampa, FL | (973) 865-6445 | odahmadi15@gmail.com | [linkedin.com/in/oahmadi](https://www.linkedin.com/in/oahmadi) | oahmadi.com

PROFESSIONAL SUMMARY

Information Security Engineer specializing in Identity and Access Management (IAM), Privileged Access Management (PAM), and cloud security. Seven years of experience in dedicated cybersecurity engineering and IT security governance roles. Hands-on expertise with CyberArk PAM, Okta SSO/MFA, and Wiz Cloud Security, including enterprise PAM migrations, multi-cloud CSPM deployments, and application security program buildouts. Consistent record of 100% audit compliance across SOC1/SOC2 and HIPAA. AWS Certified Cloud Practitioner.

WORK EXPERIENCE

Pharmacy Data Management Inc.

Information Security Engineer

Poland, OH (Remote, Tampa FL)

March 2026 - Present

- One of two security engineers responsible for the organization's security program at a healthcare PBM; manage vendor relationships for Wiz and CyberArk and own compliance evidence delivery across SOC1/SOC2 and HIPAA.
- Lead CyberArk PAM product ownership after ISPSS migration, managing Privileged Session Manager (PSM), automated password rotation, least-privilege enforcement, and Secure Tunnel logging across local admin, AWS IAM, and DMZ account tiers.
- Manage Wiz Cloud Security posture across AWS and Azure, including Security Graph-based vulnerability prioritization, remediation SLA enforcement, and RBAC-integrated GitHub and Okta identity workflows.
- Built an application security program integrating Wiz CSPM with the GitHub code repository and CI/CD pipeline using SCA and SAST scanning for vulnerability and secret detection; enabled DAST coverage for all critical applications.
- Defined and enforced a vulnerability remediation program: documented triage policy for critical internet-exposed findings, assigned ownership to asset teams within 24 hours of discovery, and drove remediation within a 10-day SLA window.
- Onboarded the PDMDMZ domain into CyberArk, provisioning all service accounts and auditing remaining privileged accounts to ensure full coverage of the new domain under PAM controls.
- Drove PSM adoption across the CyberArk admin team, increasing active session utilization from near zero to over 80% through training, policy updates, and workflow integration.
- Configured automated Wiz CTI alerts and built a triage workflow to assess incoming threat intelligence against company assets, delivering prioritized findings with recommended actions to the security advisory distribution list.

Pharmacy Data Management Inc.

Information Security Analyst

Poland, OH (Remote, Tampa FL)

March 2022 - February 2026

- Led zero-downtime migration from CyberArk Privilege Cloud to ISPSS, covering Identity Connector and Connector Management Agent installation, GPO hardening, firewall rule updates, and secondary HA connector server deployment.
- Deployed Wiz Outpost in AWS and Azure for in-account workload scanning, achieving 100% CSPM asset coverage; configured Okta integration for automated user provisioning and centralized identity lifecycle management.
- Architected Hyperion, a cyber threat intelligence dashboard integrating 16+ threat feeds for real-time CVE tracking, CVSS scoring, and automated cross-reference against Tenable scans, cutting manual triage by roughly four hours per week.
- Directed incident response for a critical SharePoint vulnerability (CVSS 9.8), coordinating emergency patching, IIS and Defender log forensics, antivirus scans, and network segmentation to contain the exposure.
- Reduced SIEM alert escalation resolution time by 30% through LogRhythm triage improvements; maintained 96%+ EDR compliance across 500+ endpoints via Microsoft Defender and Intune MDM.
- Achieved 100% compliance across SOC1/SOC2 and HIPAA audits over four consecutive cycles, delivering complete evidence packages with zero findings.
- Investigated Palo Alto PCAP logs to identify and neutralize a suspected DNS exfiltration attempt; hardened perimeter firewall rules and network segmentation policies as a result.

Wiley

Product Manager, Security and Compliance

Hoboken, NJ

April 2019 - February 2022

- Primary liaison for 100+ third-party security questionnaires, ensuring compliance with FERPA, GDPR, LTI 1.3, PCI DSS Level 3, and ISO 27001 across platforms serving over 10 million users.
- Oversaw \$6M politybooks.com migration to AWS and Cloudflare; managed the development team, negotiated vendor contracts, and ensured full security compliance with zero audit findings.

Web Developer

July 2016 - April 2019

- Led WileyPLUS web application development using secure architecture design, growing user engagement by 25%; enforced OWASP Top 10 standards and conducted code reviews targeting injection, authentication, and XSS vulnerabilities.
- Evaluated AWS security, TLS/SSL encryption, disaster recovery, and penetration testing standards as part of third-party vendor assessments and compliance questionnaire reviews.

EDUCATION

Rutgers University

New Brunswick, NJ

B.A. in Information Technology, Computer Science Minor, GPA 3.6 September 2011 - January 2016

CERTIFICATIONS

AWS Certified Cloud Practitioner | Google Cybersecurity Certificate

TECHNICAL SKILLS

IAM and PAM: CyberArk PAM (ISPSS, PSM, Privilege Cloud), Okta (SSO, MFA, Lifecycle Management, RBAC), Wiz Cloud Security, Zero Trust Architecture

Application Security: SAST, SCA, DAST, GitHub Advanced Security, CI/CD pipeline security, OWASP Top 10, secret scanning

Cloud and Infrastructure: AWS (WAF, IAM, EC2, Secrets Manager, Lambda), Azure, Wiz Outpost (CSPM), Palo Alto NGFW, Forescout NAC, Cloudflare WAF

Endpoint and SIEM: Microsoft Defender EDR, Intune MDM, LogRhythm SIEM, Splunk, Tenable Vulnerability Management, KnowBe4, Mimecast

Compliance and Frameworks: SOC1/SOC2 Type II, HIPAA, NIST CSF, PCI DSS, ISO 27001, GDPR, FERPA

Programming: Python (automation and scripting), PowerShell, GraphQL, SQL/MySQL, JavaScript, React, TypeScript, HTML/CSS, C#

Other: Incident Response, Threat Hunting, Vulnerability Management, Wireshark, CTI Platforms, Git, GitHub

PROJECTS

Wiz to HaloITSM Security Automation Integration

- Designed and built a Python-based integration between Wiz Cloud Security and HaloITSM to eliminate manual triage of critical cloud vulnerabilities, automating ticket creation, closure, and reopening in sync with Wiz issue state changes.
- Engineered a GraphQL data pipeline querying the Wiz issuesV2 API to extract critical findings with full AWS resource context including ownership tags, resource type, region, and account ID.
- Developed multi-mode execution supporting live, dry-run, and test modes for safe iterative development; added structured file logging and AWS Secrets Manager integration for credential management.
- Validated all Halo API field IDs, custom field mappings, and payload structures through live network inspection.

Hyperion Cyber Threat Intelligence Dashboard | <https://hyperion-cti.netlify.app/>

- Aggregates 16+ threat intelligence feeds including OTX, VirusTotal, AbuseIPDB, CISA KEV, NVD VulnCheck, and MISP for real-time CVE tracking with CVSS scoring and severity classification.
- Automates daily CVE cross-reference against Tenable vulnerability scans with asset exploitability detection and scheduled Excel report generation, removing approximately four hours of manual triage per week.

Cybersecurity Home Lab, Network Segmentation and DNS Security

- Built a fully segmented lab environment on Proxmox VE running on a Dell OptiPlex 7070 (i7-9700T, 16GB) with isolated VMs for Active Directory, penetration testing, and malware analysis.
- Deployed Pi-hole and Unbound on a Raspberry Pi 5 as a recursive DNS resolver with DNSSEC; implemented VLAN-based network isolation using a TP-Link managed switch.
